

How IBM Blockchain World Wire revolutionizes cross-border payments

Current international payment system today

With IBM Blockchain World Wire tomorrow

Sending money across borders today requires a series of intermediaries for both clearing and settlement, each adding time and cost to the process. With IBM Blockchain World Wire, clearing and settlement with finality happens in near real-time. The solution uses digital assets to settle transactions – serving as an agreed-upon store of value exchanged between parties – as well as integrating payment instruction messages. It all means funds can now be transferred at a fraction of the cost and time of traditional correspondent banking.

Find out how to seamlessly integrate IBM Blockchain World Wire into your cross-border payment systems at ibm.com/blockchain/solutions/world-wire today.

The IBM Blockchain World Wire difference
